

New system of door suspension in the gravity centre

Because from the view of stress on the rollers and its total lifetime the classical suspension of a withdrawable door of the corner fireplace inserts in the places of rollers isn't ideal, we were looking for a place of the suspension that would ensure both the symmetrical movement of the left and right rollers, and minimum stress on the rolling elements on the rollers. The Angle fireplace inserts now use a brand new way of door suspension in the gravity centre that shows a very quality working and a smooth closing of the door.
